

Project Change Control Form

Project Name: Panda Code Reviews

Project Manager: Nelian Colon

Change Request: Eliminate Javascript from the supported grading languages

Description (background): Javascript is a functional and interpreted language, and it has features that do not make it a suitable candidate to be used to learn programming fundamentals, i.e. professors won't use it to teach a fundamental programming course and hence there are no (or few) assignments in this programming language. It is a language that is mostly used in a browser, so a compatibility problem between Javascript programs could arise. The type of Javascript that could be evaluated within our system would be server-side, which is not suitable for fundamental classes.

Impact Assessment

Impact on Service/Quality: The project will have less available programming languages (one instead of two), but, since it is not much used for teaching classes, the impact would be minimum.

Impact on Schedule: One less task for Daniel, but the schedule impact is insignificant.

Impact on Cost? None.

Immediate Action Required? (include communication/notification of change requirements): Change supported programming language requirement.

Authorization

Requested by: Nelián E. Colón Collazo

Date Requested: November 7, 2013
